

Table of Contents

0	Foreword and Highlights of Key Points for this Series	i
0.1	Why the TG2 Series of Books?	i
0.2	What is, and is not, important, and who is this for anyway?	ii
0.2.1	Who is this Series for?	ii
0.2.2	Pedagogical issues	iii
0.2.3	Notation, Grammar, Spelling	iv
0.2.4	About Accompanying (free) Software, and Commercial Software.	v
0.2.5	About these books and relationship to <i>ARTSchool</i>	vi
0.3	Future direction & Road Map for the Series.	vii
0.4	About the Authors	viii
0.4.1	Invitation for Contribution	viii
1	A Trader's Guide to Quantitative Methods: <i>Don't Panic</i>	1
1.1	Objectives	3
1.2	Overview	3
1.3	Quantitative methods and the trading business	5
1.4	Various classes of methods for different jobs	5
1.5	Various methods within each class of methods	5
1.6	Modelling of the world vs. solution of the models	6
	PART I – Basic Maths	1
2	Basic Maths (slopes, curves, & wobbly bits)	9
3	Slopes and Derivatives	11
3.1	Slopes – What are they and why are they so important?	14
3.2	Slopes and Derivatives	17
3.2.1	Slopes and Derivatives as “Speeds” & “Straight-lines”	18
3.2.2	Types of Slopes: Chord and Tangent (derivative) Slopes	20
3.2.3	The Derivative: A Slope “in the limit”	23
3.2.4	The Mean Value Theorem: If you know the slopes, you know the value?	27
3.2.5	Chord Slope vs. Tangent Slope – Which is Right?	29
3.2.6	Examples of Slopes: Duration, Delta/Theta, Forward Prices	31
3.3	Slopes of Slopes – Accelerations, Diffusions, & Curvature	39
3.3.1	Curvature Measurement: Chord Based vs. Tangent Based	42
3.3.2	Curvature Examples: Returns, Yield/Vol Arbitrage, Options Gamma	48
3.4	Higher Order Derivatives	55

3.4.1	Higher Order Derivatives and “Fundamental” Properties	59
3.4.2	Slopes as Predictors vs. Alternate Methods	61
3.5	Generalised Derivatives	67
3.5.1	Multi-Dimensional (partial) Derivatives	67
3.5.2	Total Derivatives	71
3.5.3	The Jacobian and The Hessian	75
3.5.4	Cross Derivatives (and Correlation)	77
3.6	Notation and Interpretation	81
3.6.1	Notation for “Change”	81
3.6.2	Notation for Slopes/Derivatives	82
3.6.3	Notation for Higher Order Differentials	83
3.6.4	Example Higher Order Interacting Differentials: Option “Greeks”	83
3.7	Differential Equations as “Equations made of Slopes”	89
3.7.1	If you know all slopes/changes, do you know the value (again)?	89
3.7.2	Example: The “forward price” vs. “slope & return”	90
3.7.3	Example: The “market forecast & uncertainty” as “slopes”	94
3.7.4	Example: Black-Scholes as “slopes”	96
3.8	Differentiation vs. (mathematical) Derivatives	99
3.8.1	(Some) Rules for (Analytical) Differentiation	100
3.9	Approximating Slopes and Derivatives – Numerical Differentiation	103
3.9.1	The Most Basic Approximations	103
3.9.2	Who is Approximating Whom?	105
3.9.3	Complex Curves and Alternatives	106
3.10	“Requirements” for (Mathematical) Derivatives	107
3.10.1	Continuity in the Curve & in the Slope(s)	107
3.10.2	Types of Singularities	109
3.10.3	Multiplicity and Uniqueness	110
3.10.4	Lipschitz Continuity and The “usual calculus”	111
3.10.5	Other Types of Derivatives	112
3.11	Treatment of Singularities and Slopes of Discontinuities	113
3.11.1	Example of an “Easy Singularity” – Forward Rates from a Bootstrapped Yield Curve	114
3.11.2	Example of a “Intermediate Singularity” – Asian Options	116
3.11.3	Example of a “Hard Singularity” – Digital Options	119
3.11.4	Example of a “Very Hard Singularity” – The Markets	121
4	Sums and Integrals	125
4.1	Sums, Products, and Areas	128
4.1.1	Example Areas – Simple Interest	131
4.1.2	Example Areas – Probability Weighted Expectations/Average	133
4.1.3	Example Areas – Probability Weighted Options Expectations	134
4.1.4	Products	135
4.1.5	Example Areas/Volumes – Speed vs. Accumulation and Position Value	136
4.1.6	Example Areas/Volumes – Simple Interest with Reinvestment	139

4.1.7	Products and Sums Example: Cash, Spot & Forward Rates _____	141
4.1.8	Products and Sums Example: Bermudian Options Exercise _____	142
4.1.9	Products and Sums Example: Arithmetic vs. Geometric Returns _____	143
4.2	Integration: The Sum in the Limit _____	145
4.2.1	Illustration via Compound Interest and Spot/Forward Arbitrage _____	149
4.2.2	The “area under the curve again” – CumNorm(x) & Cos(x) _____	155
4.3	Integration and Boundary Conditions _____	159
4.3.1	Definite vs. Indefinite Integrals _____	160
4.3.2	Green’s/Stokes’ Theorem – Integration by Parts _____	160
4.3.3	Dimension Reduction (or Increase) _____	162
4.3.4	Relationship to Differential Equations _____	162
4.3.5	Integral Transforms _____	164
4.3.6	Greens Functions and Singularities _____	166
4.4	(Some) Rules for Integration _____	167
4.4.1	Relationship to Derivatives _____	169
4.4.2	Sample Rules for Specific Function Families _____	170
4.5	Interpretations of Sums & Integrals in Trading and Risk Management _	175
4.5.1	IRR vs. Zero-Coupon Curve _____	176
4.5.2	Cumulative Probability – Error Function _____	178
4.5.3	Cumulative Probability – Option Strike Price _____	180
4.5.4	Cumulative Probability – Value-at-Risk (VaR) from Distributions _____	181
4.5.5	Expected Option Pay-out Value _____	185
4.6	Multi-dimensional Sums and Integrals _____	188
4.7	Conditions and “Types” of Integrals _____	190
4.8	Quadrature: Integral Approximation _____	193
4.8.1	The Basic Idea _____	194
4.8.2	The “area under the curve again” – Convergence Bias _____	195
4.8.3	Basis Functions _____	197
4.8.4	Example Quadrature – Digital Option _____	199
4.8.5	Example Quadrature – Value-at-Risk (VaR) from Histograms _____	205
4.8.6	What is Acceptable Numerical Error vs. Business Error? _____	208
4.8.7	Integral (Approximation) by “Rank” _____	209
5	Basic Statistics – Measuring Uncertainty _____	211
5.1	Introduction to Characterising Trading Phenomenon _____	215
5.1.1	The Law of Large Numbers and “Chances” _____	219
5.1.2	Does the past predict the future, and data sets with “Memory” _____	223
5.2	Histograms – Width & Shape vs. Frequency & Probability _____	229
5.2.1	Histograms – The Basic Idea _____	231
5.2.2	Quantiles – “Direct” Measures _____	235
5.2.3	Histograms: Pre- and Post-Processing _____	239
5.2.4	Histograms – Trending vs. De-Trending _____	240
5.2.5	Example Histograms: British Petroleum – “Data Pre-Processing” _____	243

5.2.6	Example Histograms: S&P Index – “The Law of Large Numbers”	255
5.2.7	Example Histograms: US Bond Credit & Default – “Other Shapes”	261
5.2.8	Example Histograms: T-Bond Implied & Historical Volatility – “Statistical Smoothing”	266
5.3	Moments – The Traditional Statistical Measures	271
5.3.1	The “Usual Suspects”: Average, Variance, Skew, & Kurtosis	272
5.3.2	Other Types of Central Tendency Summaries	274
5.3.3	Other Types of Variability Summaries	276
5.3.4	Example Summary Measures: Credit & Default Data	278
5.3.5	Example Summary Measures: S&P Index Histories	281
5.3.6	Relationship to Quantiles, Distributions, and “Calibration”	290
5.3.7	Geometric Moments	293
5.4	Weighting and Filtering	296
5.4.1	Weighting and Filtering Example – VaR	303
5.5	(Historical) Volatility as an Empirical Statistical Measure	313
5.5.1	Historical Volatility – Sampling Length, Frequency, & Weighting	318
5.5.2	Historical Volatility – Inter-Period & Calendar Effects	323
5.5.3	Historical Volatility – Special Variations (Open/High/Low/Close)	327
5.6	Correlation and Covariance: Multi-Dimensional Statistics	332
5.6.1	The Basic Idea – Correlation & Covariance	332
5.6.2	Example Covariance: A Bond + FX Position	336
5.6.3	Example Covariance: 2-D Histograms & the Curse of Dimensionality	341
5.6.4	Independence vs. Zero-Correlation, Causality vs. Correlation, and Orthogonality	352
5.6.5	Auto/Serial-Correlation	357
5.6.6	n-Dimensional Covariance (Covariance Matrix with Equity, FX, & IR)	358
5.6.7	A Few Comments on Covariance Matrices in Trading and Risk Management	361
5.7	General Moments	366
5.8	Stationarity	368
5.8.1	Stationarity Example: FTSE Historical Volatility	370
5.8.2	Stationarity Example: US Corporate Default/Recovery Rates	373
5.9	“Moving” Moments	376
5.9.1	Example: Moving Averages (DJIA, EUR/USD, SIMEX)	379
5.9.2	Example: Histories of Historical Volatility – FTSE and S&P “vol”	385
5.9.3	Example: Moving Correlation in Structured Products (Quanto’s, Convertible Bonds, Hedging, Bond Spreads, Asset Allocation)	391
5.9.4	Example: Moving Quantiles (VaR/Economic Capital)	401
5.9.5	Histories of “Historicals” and Serial Correlation	404
5.9.6	Stationarity vs. Moving Moments in Pricing/Risk Formulations	406
5.10	Basic Stats – <i>Do’s & Don’t’s</i>	408
6	Probability Basics – Expectations & Models of Uncertainty	411

6.1	Expectations	413
6.1.1	The Law of Large Numbers (again): Samples vs. Population	415
6.1.2	Expectations in Trading and Risk Management	416
6.1.3	Expectations of Expectations	417
6.2	Probabilities	419
6.2.1	Intuitive Description vs. Set Theoretic Description	420
6.2.2	Manipulating Probabilities and Boolean Operators	421
6.2.3	Probability Spaces & Algebras (Borel, Sigma, etc)	425
6.3	Expectations and Distributions	428
6.3.1	Discrete vs. Continuous Processes	430
6.3.2	Distributions for Random Number Generation and Predictions	432
6.4	Discrete Expectations and Distributions	433
6.4.1	Discrete Expectations	434
6.4.2	Discrete Distributions	437
6.4.3	The Four Most Important Discrete Distributions (Binomial, General, Hypergeometric, & Poisson)	439
6.5	Continuous Expectations and Distributions	455
6.5.1	Continuous Expectations	455
6.5.2	Continuous Distributions	457
6.5.3	The Five Most Important Continuous Distributions (Log/Normal, Uniform, χ^2 , Weibull, & General)	462
6.6	Multi-Dimensional Distributions	485
6.6.1	Example: Discrete Distributions in 2- Dimensions	486
6.6.2	Example: Continuous Distributions in 2- Dimensions	489
6.6.3	Distributions in n- Dimensions	491
6.7	Expectations and Distributions Summary	493
6.8	Examples of Using Distributions in Trading and Risk Management	495
6.8.1	Valuation and Risk of a Bet: Coin & Dice Games	495
6.8.2	First Valuation of Vanilla and Digital Options	502
6.8.3	First Valuation of Credit Default Insurance	507
6.9	First Introduction to Modelling the Markets with Distributions	511
6.9.1	A 1st “Good” Shape for Uncertainty – Equity Markets	513
6.9.2	A 1st “Good” Shape for Uncertainty – IR Markets and Term-Structure/Mean Reversion	519
6.9.3	A 1st “Good” Shape for Uncertainty – FX Markets and Jumps/Channels	525
6.9.4	A 1st “Good” Shape for Uncertainty – Commodities and Skews/Jumps	530
6.9.5	A 1st “Good” Shape for Default Uncertainty – Stationarity, Data Quality, & Supply Push	535
6.9.6	Summary of Some Non-Market Modelling Considerations	541
6.9.7	Summary of Some Technical Modelling Considerations	543
6.10	Inverse Distributions	546
6.11	Approximating Distributions	551

6.11.1	Distribution Transformations _____	552
6.11.2	Fitted Distributions (Quasi-Closed Form Approximations) _____	555
6.11.3	Approximating Discrete Distributions _____	559
6.11.4	Approximating Continuous Distributions _____	564
6.11.5	Continuous Distribution Approximation vs. Discrete Distribution? _____	566
6.12	Properties and Manipulation of Distributions _____	568
6.12.1	Manipulation: Area Preservation as an Auxiliary Equation _____	568
6.12.2	Manipulation: Shifting or De-coupling the Average _____	570
6.12.3	Manipulation: Scaling, Stretching, and Area Preservation _____	573
6.12.4	Terminology: Prices based vs. Returns based Distribution _____	575
6.12.5	The Central Limit Theorem _____	576
6.12.6	Quantiles, Standard Deviation, and Multiples Rules _____	579
6.13	Moment Generating Functions and the Characteristic Equation _____	586
6.14	Statistical Inference _____	589
6.14.1	Hypothesis Testing and Statistical Significance _____	590
6.14.2	The p-value and z-test: Standard Error, Confidence Intervals, and Statistical Significance. _____	592
6.14.3	The p-value: Are Two VaR's the Same? _____	597
6.14.4	The t-test: Are 2 Means the Same? _____	599
6.14.5	Example: Compare Two Investment's Returns – Asset Allocation _____	600
6.14.6	The F-test: Are Two Variances the Same? _____	602
6.14.7	Example: Compare Two Investment's Risks: Asset Allocation _____	604
6.14.8	The χ^2 -test: Are Two Histograms the Same? _____	606
6.14.9	Example: Is the World Normally distributed? _____	608
6.14.10	The Kolmogorov-Smirnov-test: Are Two Distributions the Same? _____	613
6.14.11	Example: Does Risk/Return Analysis Work in a Non-Gaussian World? 614	
6.15	Lies, Damn Lies, and Statistics – Simpson's Paradox and "prop trading" _____	618
7	Basic Linear Algebra and Matrix Methods 101 _____	619
7.1	BLA and Matrices: What and Why _____	621
7.1.1	Vectors, Arrays, and Matrices _____	621
7.1.2	BLA & Matrix Examples: Convenience and Representation _____	626
7.1.3	BLA & Matrix Example: Portfolio Covariance/Correlation Matrix _____	638
7.1.4	BLA & Matrix Example: Risk-adjusted Return Analysis _____	641
7.2	Linearity _____	644
7.2.1	"Really" Linear _____	644
7.2.2	Linear in Coefficients _____	644
7.2.3	Linear Approximation of General Problems _____	647
7.3	(Some) Rules of Matrix Arithmetic _____	649
7.3.1	Scalar Multiplication _____	650
7.3.2	Scalar and Vector Addition _____	650
7.3.3	Vector and Matrix Multiplication _____	650
7.3.4	Vector "Products" _____	653

7.4	Matrix Inversion	656
7.4.1	Inversion: Direct Methods – LU Decomposition	659
7.4.2	Inversion: Iterative Methods	663
7.4.3	Inversion: Choleski Decomposition	667
7.4.4	Inversion: Sparse Systems	669
7.5	Matrix Properties	671
7.5.1	Singularities	671
7.5.2	Determinants	677
7.5.3	Eigenvalues and Eigenvectors	679
8	Expanding the Complex	683
8.1	Series Expansion & Representation	684
8.1.1	Polynomial & Power Series Representation	687
8.1.2	Trigonometric Representation	690
8.1.3	Taylor Series	692
8.2	(a few) Series Expansion Notes	695
8.2.1	Singularities and Higher Order Terms	697
8.2.2	Digression: Stochastic and Aperiodic (Chaotic/fractal) Problems	699
8.2.3	Big O and Little O	701
8.2.4	“Big O”	702
8.2.5	“little o”	702
8.2.6	Analyticity	702
9	Software and Resources for Part I	705
9.1	General Comments about Software	706
9.2	Software for Basic Maths & Stats	708
9.2.1	Types of Software for Basic Maths & Stats	708
9.2.2	Specific Computational Considerations	718
9.3	Selected Books, and On-Line Resources	721
9.3.1	Selected Books & Example On-Line Resources	723
9.4	Consulting & Educational Services and Facilities	729
9.5	Data Quality	731

PART II – Selected Maths

		705
10	(Almost) everything you need to know about Curves & Surfaces	735
10.1	Curve & Surface Fitting: The Basic Idea	478
10.1.1	Graphical Illustration of Interpolation and Approximation	479
10.1.2	The basic Idea – One “Big Curve” or Many “Small Ones”	481
10.2	Interpolation Methods	482
10.2.1	Interpolating Between Two Points	482
10.2.2	Example: Straight-line Interpolation of Two Bond Yields	483

10.2.3	What if the Data is “Curved”?	484
10.2.4	Example: Exponential Interpolation of Two Discount Factors	484
10.2.5	Caveat – Fitting vs. Implied Modelling Assumptions & Consistency	486
10.3	Interpolation Methods – Fitting Entire Curves	487
10.3.1	What does it mean to “fit” a curve?	487
10.3.2	Piece-Wise vs. Global	488
10.3.3	Other Interpolation (basis) Curves	489
10.4	Interpolation Methods – Splines	491
10.4.1	What are “splines”? – Intuition vs. Maths	491
10.4.2	Representation of a cubic spline	493
10.4.3	Application of splines	496
10.4.4	Derivation & Calculation of Cubic Splines	499
10.4.5	Example Spline – LIBOR Swap Rates	507
10.4.6	A Few Technicalities for (Cubic) Splines	509
10.4.7	Some Dangers with Real World Splines	510
10.5	Interpolation Methods – “Advanced Splines”	516
10.5.1	Tension Splines	517
10.5.2	Adaptive Corrective O-Splines	523
10.5.3	B-Splines	527
10.5.4	Bezier Splines	528
10.6	Interpolation Methods Accuracy	530
10.7	Interpolation Case Study: Cubic Splines for Swap/Yield Curves	531
10.7.1	A Sample EUR Yield Curve Interpolation/Pricing Problem	531
10.7.2	Implications for Market Convention and Practice	535
10.8	Approximation Methods	538
10.8.1	The Basic Idea – Approximation	538
10.8.2	When to Use	539
10.8.3	The Basic Idea – The Method of Least Squares	540
10.9	Approximation in General	542
10.9.1	Multi-parameter Curves	542
10.9.2	Mixed Curves	545
10.9.3	Error Minimisation Strategies	546
10.9.4	Maximum Likelihood Estimation	547
10.10	Approximation Methods Accuracy	550
10.10.1	Goodness of Fit – R^2 and F-Test	550
10.10.2	Goodness of Fit – Parameter Significance and t-Tests	553
10.10.3	Analysis of Variance – ANOVA	554
10.10.4	Analysis of Correlation/Covariance (ANOCO/ANOCOV) and Causality	558
10.11	Non-linear Least Squares	560
10.12	Approximation Case Study: Duration and Volatility	562
10.13	Summary of (scalar) interpolation and approximation	569

10.14	Surfaces	570
10.15	Surfaces – Interpolation of Regularly Spaced Data	571
10.15.1	Interpolation Methods: (Linear) Surface Tiling	572
10.15.2	Interpolation Methods: (Non-Linear) Surface Tiling	577
10.15.3	Interpolation Methods: Surface Splines	578
10.15.4	Interpolation Methods: Summary	579
10.16	Surfaces – Approximation of Regularly Spaced Data	580
10.16.1	2-D General Least Squares	580
10.17	Surfaces – Interpolation of Irregular Data	584
10.18	Surfaces – Approximation of Irregular Noisy Data	586
10.18.1	Quasi-Statistical Fitting, Visualisation, and Validation.	588
10.18.2	Multi-dimensional Surface Fitting – Comments	591
10.19	Case Studies	592
10.19.1	Case: Skew and Term-Structure of Volatility	592
10.19.2	Case: Are Bonds Cheap/Dear?	596
10.19.3	Case: Volatility Cones (S&P Futures/Options)	601
10.19.4	Case: (Options) Arbitrage	602
10.20	Other considerations	604
10.20.1	Data implications	604
10.20.2	Numerical implications	604
10.20.3	Some Other Problems with Surface Fitting	605
10.21	Summary of Curve and Surface Fitting	607
11	The Answer is in the “Root”	611
11.1	The Basic Idea	611
11.2	The Bisection Method	614
11.2.1	Bisection Methods Example: Calculate IRR from Cash Flows	615
11.3	Newton’s Method	617
11.3.1	Newton’s Method Example: Implied Volatility from Option Prices	618
11.4	Multi-Dimensional Problems	621
11.4.1	Multi dimensional Example – Portfolio Immunisation	622
11.5	Properties of the Methods	625
11.5.1	Multiple Solutions	625
11.5.2	Local Minima	626
11.5.3	Pathological Circumstances	627
11.6	Root Finding as (a kind of) Optimisation/Minimisation	628
11.7	Summary of Root Finding	629
12	Valuation and Risk Under Uncertainty – Part 1	631
12.1	Overview of the underlying issues	633
12.1.1	Mathematical modelling of securities prices	633

12.1.2	Some Simplifying Assumptions for Economics and Finance	634
12.2	Modelling the Price/Returns processes – The Basic Idea	636
12.2.1	The “Goal”	636
12.2.2	A First Qualitative Model of Price Dynamics: Trends and Wobbles.	637
12.3	Developing a “drift free” Model for Valuation Under Uncertainty	644
12.4	Review of Basic Issues	646
12.4.1	Expectations – for Traders	646
12.4.2	Re-coupling and De-coupling Drift	647
12.4.3	Forecasting vs. Trading – Running a Business	648
12.4.4	Forecasting vs. Valuation	649
12.4.5	Risk and Return – Revisited	651
12.5	A First Quasi Forecasting Model – without Time Evolution of Uncertainty	653
12.5.1	A First “Good” Shape of Uncertainty	654
12.5.2	Forecasting Prices vs. Forecasting Returns Re-visited	655
12.5.3	A First Calibration of the “Model”	658
12.6	A First Quasi Forecasting Model – with Time Evolution of Uncertainty	662
12.6.1	Time Evolution of Uncertainty	662
12.6.2	An Intuitive Approach to the Time Evolution of Uncertainty	664
12.6.3	Some Technical Considerations for a 1 st Model of the Evolution of Uncertainty	666
12.6.4	A First Formulation of the Evolution of Uncertainty	667
12.6.5	“Another” Calibration of the Model and Annualisation	669
12.6.6	Formalising the First (proper) Model of Uncertainty	671
12.7	Putting it all together: A First “Complete” Model for Valuation Under Uncertainty	688
12.7.1	A Valuation of Digital Options	689
12.8	Other Models for Valuation Under Uncertainty	696
12.9	Summary: A First “Complete” Model for Valuation Under Uncertainty	697
13	Stochastic Calculus (that even traders can understand)	700
13.1	Stochastic Differential ... What?	701
13.1.1	Differential Equations	701
13.1.2	Why Another Calculus?	701
13.2	(A little) Stochastic Calculus	704
13.2.1	Brownian Motion & Wiener Processes	705
13.2.2	Stochastic Slope: Taylor, Ito, and Others	708
13.2.3	Ito’s Lemma	709
13.2.4	Ito’s Lemma – The Trader’s Version	710
13.2.5	Ito’s Lemma – The Math Guy’s Version	713
13.3	(A little) More Stochastic Calculus	717
13.3.1	Martingales	717

13.3.2	Markov Processes	718
13.3.3	Change of Measure – the touchy feely version	718
13.3.4	Change of Measure – Girsanov’s Theorem	722
13.3.5	Change of Numeraire	723
13.3.6	Term Structure Models and HJM	725
13.4	Stochastic Calculus vs. Valuation and Trading	727
13.4.1	Risk Neutral Valuation – The Trader’s Version	727
13.4.2	Risk Neutral Valuation – The Math Guy’s Version	728
13.4.3	Risk Neutral Valuation – The Reality	732
13.4.4	Arbitrage Free Valuation – The Trader’s Version	733
13.4.5	Arbitrage Free Valuation – The Math Guy’s Version	735
13.4.6	Arbitrage Free Valuation – The Reality	736
14	Valuation Under Uncertainty – Part 2	739
14.1	“Other” Models for Valuation Under Uncertainty	741
14.2	Representations of the Price Process	743
14.2.1	The price process in discrete time steps	743
14.2.2	Guide-lines for choosing a price process	744
14.3	Gaussian Processes and the “The Usual Suspects”	746
14.3.1	Arithmetic Brownian Motion	746
14.3.2	Geometric Brownian Motion (our old friend)	748
14.3.3	Ornstein-Uhlenbeck: Mean Reverting & CEV	750
14.3.4	Jump Diffusion	752
14.4	Generalised distributions	754
14.4.1	(Some) Real World Effects	754
14.4.2	General Distributions	762
14.5	Special Cases: Multi-Index /Multi-Factor Problems	763
14.5.1	Multi-Index Contracts: 2-Factor Valuation	764
14.5.2	Spread Options	766
14.5.3	Stochastic Volatility	768
14.5.4	n-Factor Valuation vs. Forecasting Problems	769
14.6	Special Cases: Term-Structure Methods	771
14.6.1	Basic Terminology	773
14.6.2	A simple One-Factor Model (non-traditional)	774
14.6.3	A simple Two-Factor Model (non-traditional)	776
14.6.4	Traditional Term-Structure Representation	777
14.6.5	Comparison of Selected Term-structure Models	779
14.6.6	Traditional Term-Structure: How Many Factors are “Best”?	783
14.6.7	Traditional Term-Structure: Calibration	784
14.6.8	Functional Representation	786
14.6.9	Alternatives to SDE Representation	788
14.7	Summary	789
15	Introduction to Time Series Analysis and Dynamics	792

15.1	Time Series Analyses – Econometrics	776
15.1.1	Traditional Time Series Analysis – Simple	777
15.1.2	Traditional Time Series Analysis – ARIMA	780
15.1.3	ARMAX Example: S&P Forecasting	783
15.1.4	Econometrics and Fundamental TSA	787
15.1.5	GARCH and Volatility Forecasting	788
15.1.6	Econometrics and TSA: Advanced Considerations	795
15.2	Time Series Analyses – Spectral & (Non-Linear) Dynamical Analysis	797
15.2.1	When is a price history “truly” random, and when is it predictable?	798
15.2.2	Real vs. Synthetic and Random vs. Predictable Data	799
15.2.3	Is There “Structure” in the Data?	800
15.2.4	Return Maps – Deterministic vs. Chaotic vs. Random	801
15.2.5	Predictable vs. Random Structure Summary	805
15.3	Spectral Analysis and Periodic Processes	806
15.3.1	Periodicity and Aperiodicity	806
15.3.2	Representations of Periodicity	807
15.3.3	Return Maps – Extended Interpretation	810
15.3.4	Dynamical Systems: Attractors, Repellers, and Steady State	811
15.3.5	Spectral Analysis – Fourier Series, Fourier Transform, and Power Spectrum	815
15.3.6	Spectral Analysis of Market Data	822
15.3.7	Spectral Analysis of Market Data: Forecasting Markets with Fast Fourier Transforms	823
15.3.8	Spectral Analysis of Market Data: Singularities and Scale Invariance	825
15.3.9	Spectral Analysis Summary	829
15.4	Aperiodic Systems, Fractals/Chaos, and Non-Linear Dynamics	831
15.4.1	Fractals: “Fractional Dimension”	831
15.4.2	What is “Dimension” anyway?	832
15.4.3	Properties of Fractals	833
15.4.4	Fractals and (the Measure of) Distance	836
15.4.5	Measuring Fractal Dimension	836
15.4.6	Correlation Dimension	837
15.4.7	Example Fractal Dimensions	840
15.4.8	Measures of Dimension and Brownian Motion	842
15.4.9	Fractional Brownian Motion	844
15.4.10	Fractal Dimension and Reality Impact	846
15.4.11	Dynamical Systems and “Strange” Attractors.	847
15.4.12	Dynamical Systems: Intermittency and “Non-Stationary” Attractors/Steady-States.	853
15.4.13	Forecasting with NLD: Models, SIC, and Profitability	855
15.4.14	Valuation and Risk Management with Aperiodic Models	859
15.4.15	Fractal-adjusted Options Trading	860
15.4.16	Fractal-adjusted Trading and PaR	861
16	Introduction to Optimisation	865

16.1	Mathematical vs. Trading “Optimal”: the Basic Issues	867
16.1.1	Math vs. Trading vs. Risk/Return	867
16.1.2	Integer vs. Continuous	868
16.1.3	Multi-Dimensional and Constrained Optimisation	868
16.1.4	Deterministic vs. Stochastic Optimisation	870
16.1.5	Locally vs. Globally Optimal	870
16.1.6	“Single Event Optimal vs. “Collection Optimal” (or Static vs. Dynamic& Path-Dependence)	871
16.1.7	Selection of the (Mathematical) Optimiser	872
16.2	Mathematical Optimisation	874
16.2.1	Mathematical Programming	874
16.2.2	The Basic Idea – Linear Problems	874
16.2.3	The Basic Idea – Non-Linear Problems	875
16.2.4	Non-Linear Problems and (some) Terminology	877
16.2.5	Rank Optimal	880
16.2.6	Linear Programming (SIMPLEX)	880
16.2.7	SIMPLEX Example – Hedge Fund Client	883
16.2.8	“Linear Non-Linear” Problems	885
16.2.9	Quadratic Programming	887
16.2.10	QP Example – Hedge Fund Client	889
16.2.11	Quadratic Programming: MVO – without Efficient Frontiers	891
16.2.12	MVO Example – Hedge Fund Client	892
16.2.13	Quadratic Programming: MVO – (some) Practical Considerations	895
16.2.14	(Non-Linear) Dynamic Programming – The General Case	904
16.2.15	The story so far	905
16.3	Trading & Risk Management Optimisation	906
16.3.1	A Single Rebalance – Position Keeping & Risk Optimal	907
16.3.2	A Single Rebalance – Asset Allocation (MVO with Efficient Frontiers)	916
16.3.3	A Sample MVO Optimal Asset Allocation	921
16.3.4	(Some) Considerations for MVO Optimal Asset Allocation	924
16.3.5	Efficient Frontier/MVO Summary	927
16.4	PaR Optimal Holding Period Risk-Adjusted P&L	928
16.4.1	PaR Basics	929
16.4.2	PaR Trading & Risk Management – An Example	931
16.4.3	Mathematically Optimal vs. PaR Optimal (PaR Efficient Frontiers)	935
16.4.4	PaR and “Optimising the Optimiser”	937
16.5	(Some) Computational/Implementation Considerations	941
17	A First Description of Four Important Numerical Methods	943
17.1	PDEs as Forecasting and Valuation Models Under Uncertainty	945
17.2	Differential Equations/Numerical Methods Preliminaries... and Why?	948
17.2.2	Some Differential Equations Terminology	949
17.2.3	Some Numerical Methods Terminology	952
17.3	Monte Carlo Methods	955

17.3.1	Monte Carlo Basics	957
17.3.2	Pricing a Vanilla Option with Monte Carlo Simulation	964
17.3.3	Pricing a Barrier Option with Monte Carlo Simulation	969
17.3.4	MC Methods: The Story so Far	980
17.3.5	(Some Advanced) Considerations for MC Methods	981
17.3.6	PaR, Arbitrage, & Position Keeping with Monte Carlo Simulation	989
17.3.7	Monte Carlo Simulation: Pros/Cons	992
17.4	Trees and Lattices	993
17.4.1	(Binomial) Trees - The Basic Idea	993
17.4.2	Binomial Tree Implementation of a Vanilla (European) Option	996
17.4.3	Binomial Tree Implementation of a Vanilla (American) Option	1001
17.4.4	Binomial Tree Implementation of Black-Derman-Toy Term-Structure Bonds/Bond Options	1003
17.4.5	(Some) Consideration for Trees and Lattices and Pros&Cons	1010
17.5	Finite Difference Methods	1012
17.5.1	The Basic Idea	1013
17.5.2	Formal FD and Taylor Series Expansion	1017
17.5.3	The Explicit Finite Difference Scheme	1019
17.5.4	Explicit Finite Difference Black–Scholes Formulation	1022
17.5.5	(Some) Numerical Considerations	1025
17.5.6	Implicit Finite Difference Black–Scholes Formulation	1026
17.5.7	Implicit FD Options Pricing Example	1030
17.5.8	FD for Complex Problems in a Homogenous Valuation Framework	1031
17.5.9	Finite Difference Methods: Pros/Cons	1032
17.6	Finite Element, Variational, and Boundary Methods	1033
17.6.1	Variational Calculus	1034
17.6.2	Galerkin and Weighted Residuals	1035
17.6.3	Finite Elements and Pricing a Vanilla Option	1037
17.6.4	Boundary Methods and Non-Linear Least Squares with Arrow-Debreu	1041
18	Introduction to Principal Component Analysis	1045
18.1	Eigenvalues and Coordinate Systems Revisited	1047
18.1.1	Coordinate Systems	1047
18.1.2	Eigenvalues of Matrix	1050
18.1.3	Singular Value Decomposition	1050
18.1.4	Characteristics vs. Projections: Forecasting with Eigenvalues	1051
18.1.5	Benchmark yields can be co-ordinate systems as well	1053
18.2	Principal Components: <i>Eigenvalues</i> and <i>Eigenvectors</i> of Stochastic Processes	1054
18.2.1	The Basic Idea	1054
18.2.2	“Kind of a least squares problem”	1055
18.2.3	PCA Procedure Overview	1055
18.2.4	Computational Considerations	1057
18.3	PCA Example – Term-Structure Models “how many factors are enough?”	1058

18.3.1	PCA of Term Structure Data: Example Results	1058
18.3.2	PCA of Term Structure Data: Example Interpretation	1060
18.4	Term-Structure Modelling with PCA	1061
18.4.1	Classical Term-Structure Model	1061
18.4.2	Coming Full-Circle: Eigenvalues and Term-Structures	1064
18.4.3	“Brute force” Term-Structure Model	1065
19	Software and Resources for Part II	1067
19.1	Software & Resources for Selected Maths	1067
19.1.1	Curves and Surfaces	1068
19.1.2	Root Finding	1068
19.1.3	Stochastic Calculus	1068
19.1.4	Valuation and Modelling	1069
19.1.5	Time Series Analysis	1069
19.1.6	Optimisation	1069
19.1.7	PDEs	1069
19.1.8	PCA	1070
